SUMMARY

Senior Product Designer with 5+ years in product design, 6 years in fintech, and 13 years in design overall. I lead design for B2B and B2C fintech products from discovery and research to delivery, shaping the end-to-end customer experience across onboarding, complex regulated flows, and operational workflows. I ensure cross-product consistency and evolve design systems, working closely with product, engineering, analytics, compliance, and business stakeholders. I take on product management responsibilities on selected initiatives and build low-code and AI-assisted prototypes.

WORK EXPERIENCE

May 2020 – July 2026

Garage Eight

Fintech company: B2B and B2C products

2023 – July 2026

Senior Product Designer

- Redesigned onboarding and verification flows (KYC/KYB) for individuals and businesses, covering complex branching scenarios, document requirements, approval states, and edge cases. Research and benchmarking informed early access and broader eligibility for smaller partners, a segment contributing 10–20% of program profit.
- Researched and designed a multi-user account structure with a primary owner, employee access permissions, and nested sub-accounts for separate brands or regions.
- Led the design of a standalone B2B partner portal, from customer journey mapping and service blueprints to interface design and delivery planning. Preserved partner access during the transition; clients cited the interface as a competitive advantage.
- Redesigned B2B rebate and payout workflows to meet regulatory requirements, helping prevent an estimated \$XXXk in revenue loss. Developed interim and automated payout solutions, tested a Cursor prototype with partners, and prepared the design for a pilot rollout.
- Led B2B workflow audits and took product management responsibility for B2C changes during a licensing split. The adaptations passed compliance review, preserved user access, and automated operational workflows.
- Tested a new B2B business model through partner research, presentations, and portal adaptation. 80% of participating top partners accepted the proposed terms; pilot metrics remained stable.
- Drive the B2B research practice: planned studies, developed interview guides, worked with a researcher on analysis and hypothesis validation, and introduced new recruitment approaches. Reduced recruitment time by ~60% while doubling participant numbers.

- Drove continuous development of the B2B product through feature design, hypothesis generation and validation, journey simplification, and iterative improvements based on partner feedback and product needs. Revisited partner-facing analytics, reports, and metrics to make them more useful for decision-making.
- Modernized a legacy B2B interface and continuously adapted product flows as regulatory requirements evolved, balancing usability with compliance constraints. Worked on product copy and localization independently and together with a UX writer, using Crowdin for multilingual content.

2020–2023

Brand & Product Designer

- Designed 7+ significant changes to B2C product functionality for web and Android, from research prototypes through developer handoff and implementation review.
- Developed a cross-platform design system for web and Android as part of a company rebrand, including design tokens, dark mode, and developer guidelines.
- Created a B2B visual identity informed by partner journey mapping and an experience audit. Built a Webflow website with Crowdin localization integration and maintained it for 3+ years.
- Designed and maintained features across multiple B2B and B2C products, including user-generated content.
- Designed and coded email campaigns, produced motion assets, and developed shared libraries of icons, illustrations, and 3D assets across the company.

2013–2020

Graphic & Brand Designer

Product branding, websites, advertising, and interior/exterior graphics

In-house roles and independent projects for Astrakhan24 TV channel, AstMarket, GRADD studio, and Art Salon at ASU.

SKILLS
